

# Data Protection

We understand that security concerns are a top priority for you when it comes to managing your financial information. That's why we wanted to reassure you that our PreciseFP platform is specifically designed with advanced privacy and protection features to ensure that your data is always kept private and protected.

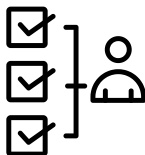

## Encryption

State-of-the-art, 256-bit SSL data encryption and intrusion detection for highest level of data security.

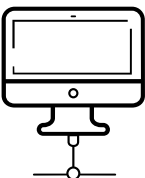

## Authentication

High-Security level forms require authentication for engagement via SMS, Email or Password.

## Routine Audits

We work closely with external security experts who perform penetration tests and audits to assist our efforts.

## Non-transactional

Financial information is high level by default and not captured in detail. Furthermore, sensitive information fields can be encrypted to provide additional security measures.

We are committed to constantly improve the security of our application.
